

Oerlikon Schlafhorst enumerates five good reasons for success with Autoconer 5

by Heike Scheibe, Winding Schlafhorst and André Wissenberg, Oerlikon Textile

The Autoconer is a classic that never goes out of fashion and sets trends time and again.

At ITMA in Munich, Oerlikon presented the fifth generation: the Autoconer 5. This new development once again takes account of the latest demands of the market and customers and integrates future-oriented, innovative engineering. The advantage that the Autoconer 5 offers are precisely those services, that makes a spinner strong for successful business in the global textile industry. In future you can produce in a quicker, more demanding, more efficient, more intelligent and more reliable way.

Autoconer 5
Type RM.

Be more efficient, because saving resources means saving money

The Autoconer 5 offers various potential savings in terms of time, staff, yarn, energy and air. The user-friendly, open design, intuitive operation thanks to the new Informator and new winding unit display, reduced maintenance, reduced hardware handling make it easier for your staff. Savings of your valuable yarn resources due to Ecopack FX, the unique upper yarn sensor are also worth to be mentioned. And last but not least savings in energy and air consumption are also important advantages of the Autoconer 5.

Be faster, because time is money

The trademark of the Autoconer 5: Every winding unit clearly functions more productively. Greater dynamics in the winding process, faster setting up, accurate fault diagnoses, Plug & Wind technology for the rapid expansion / changeover of your performance spectrum and a lower outlay on maintenance all contribute to more productive machine running time and smooth machine and process sequences.

Be more demanding, because the result counts

The Autoconer 5 produces high-end packages that are worth their price today and tomorrow. With Autotense FX, Propack FX, Variopack FX and Ecopack FX, you're unbeatable when it comes to package quality. Your valuable yarn receives gentle treatment on the Autoconer 5 - the greater linearity of the yarn path with its optimized arrangement of the units and the new waxing unit see to that. Its unique splicing competence is based on the universality of the splicing technology.

Autoconer 5 Type D1

Be more intelligent, because man and machine form a team

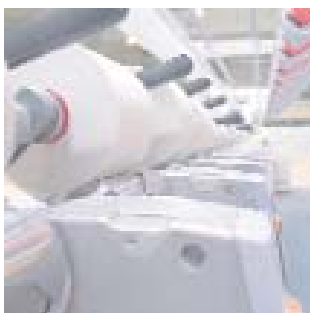

A well-drilled team is hard to beat, and you should be able to rely on that in your production. That's why the Autoconer 5 communicates simply and clearly with your employees.

The Autoconer 5 contains the know-how that your operators need to produce quality packages. Interactive user prompting, built-in protection against faulty operation, optimized hardware-handling and interactive knowledge transfer via the Informator - with this the Autoconer 5 helps your staff to get better winding results.

Be more confident, and your investment will bear fruit for many years

With the Autoconer 5, you are assured of package winding technology with a future, to produce quality on a long-term basis.

The innovative Plug & Wind Technology, the newly developed electronic concept with modular construction are the main points to give highest flexibility to be prepared for the future. ♦
