

# SSM X-Series: The most economized winding solution

The machines (TWX-W/D, PWX-W and PSX-W/D) are the most economized winding solution, reduced to the max yet maintaining highest flexibility for any cost efficient winding application. From SSM GIUDICI came the DP5-T with single-execution showing fancyflex™ for the production of slubs and thick & thin effect yarns.

The SSM DURO-TD precision assembly winder for coarse technical yarns up to 50000 dtex offers a new level of flexibility and package quality in one machine; thereby ensuring optimal unwinding and running performance in all twisting processes.

The XENO-platform with the enhanced DIGICONE® 2 winding algorithm, enabling a 10 to 20% increase on dye package density with same dyeing recipe.

Finally the SSM TK2-20 CT / KTE a finish winder for sewing threads. SSM can provide solutions for False Twist Texturing, Air Covering, Draw Winding, Yarn Singeing and Conventional Covering.

Detailed information about textile machines with leading technology is available on SSMs webpage. ♦
