

# FERRARO: State-of-the-art finishing solutions for Pakistani market

The X-PRESS 4T is the new tubular rope opening machine for the squeezing of the tubular knitted fabrics after the dyeing process.

The **X-PRESS 2T/4T** provides the opening, squeezing and chemical application for tubular fabrics. The high-efficiency balloon squeezer for knitted fabrics in tubular form comes with the unique and patented rubber compound, that ensures the lowest residual moisture at low pressure.

The **EASY COMPTEx** is suitable for the compaction of any kind of tubular knitted fabric. The machine cylinders with a big diameter (470 mm) allow compacting and speed values not reachable with standard machines. EASY COMPTEx can be provided with different kind of exit modules; one for high precision folding, another one for high precision rollers. ◆

# CIBITEX sanforizer model ShrinkTEX W series

Cibitex Srl is one of the leading manufacturers of compressive shrinking lines for woven fabrics and open width knitted fabrics. The sanforizing and shrinking plants for open knitted fabrics are recognised worldwide, together with Cibitex denim finishing lines

## ShrinkTEX series W

ShrinkTEX series W is specially made for the treatment of fabrics. This machine has two main purposes. First to shrink the fabric in order to give a dimensional stability to wovens fabrics.

Secondly to ensure a soft and pleasant hand and finishing touch to fabrics. This can be achieved by processing the fabric into the shrinkage unit with rubber belt and felt calender (palmer).

CIBITEX provides different configurations of shrinkage lines, in accordance with the type of fabrics that are to be processed, their weight, and required production capacity.

## SingeTEX series W

SingeTEX series W is modern and technologically advanced machine range

and we took into consideration both environment and safety standards.

These singeing plants are complete with all the necessary devices to adjust the flames and the singeing position. The dogal system at the input with expanding unit is specially designed for the treatment of knits.

The possibility to equip the machines with 1 or 2 burners and also the water flow control for the cooling of burners and operating rollers offers additional benefits.

The fabric feeding device in machine allows an efficient fume exhaust from the unit. The fume and dust removal system is an environment-friendly system to remove the pollution. A particular system designed by Cibitex is ideal for flame adjustment which allows excellent results even on delicate fabric articles. ◆
