

Sensient presents ElvaJet Alpha and Sensijet® SX technology

Sensient Imaging Technologies is a leading supplier of inkjet inks for digital textile, industrial digital and sublimation printing. As a pioneer developer of innovative digital printing solutions Sensient is placing the customer experience in the core of its offer. Sensient offers one of the widest range of inkjet inks for textile, UV-curable, edible and water-based inks for industrial printing applications.

Sensient's ElvaJet® Alpha represents a major innovation in sustainability that reduces the environmental impact of textile printing without compromising on the quality of the printed product. The inks developed under this platform offer superior color vibrancy and through print. ElvaJet® Alpha inks can be applied directly onto virtually any polyester textile, being fixed only with dry heat. With the use of ElvaJet® Alpha inks, there is no washing or other finishing step needed.

Rudy Grosso and Christophe Bulliard

Sensijet® SX technology is sustaining a range of highly versatile aqueous inks for printing onto non-porous and semi-porous substrates. The pigmented, water-based

inkjet inks under this platform are Sensient's environmentally friendly alternative to UV curable and solvent technologies in industrial and commercial printing applications.◆

J-Teck3: Italian specialist in digital textile inks

The latest product range developed by J-Teck3 is J-Cube, an innovative and versatile disperse ink especially studied for fast digital printers mainly used in the digital textile industrial field.

Offering an extensive gamut of vivid colours including striking fluorescent and varying shades of black, J-Cube equips textile companies with superior colour combinations and the capabilities to produce premium fabric products. Manufactured using J-Teck3's unique Cluster Technology, the water-based piezo inks enable excellent printability, fast-drying and high quality image definition when used with high-speed digital printers equipped with

Kyocera, Ricoh, Konica Minolta and Panasonic print heads. Available for either transfer or direct-to-fabric printing, the

inks' versatility spans a vast array of polyester applications including fashion and home decorations.◆
