

Tonello ECOFREE 2: The ultimate ozone treatment

Tonello ECOFREE 2 is an ultimate ozone treatment technology with reduced energy consumption with new fashionable effects.

In 2013, with the launch of ECOfree, Tonello took denim ozone treatment to the next level. In 2017 four years later, Tonello comes back to revolutionize the market with the latest evolution of its most avant-garde technology, even more, efficient and higher performing finishing of denim.

In fact, according to Tonello, the newest evolution of ECOfree allows you to treat your garments with ozone both in water and in the air. Thanks to the use of cold plasma generators they are able to obtain higher concentrations of ozone with lower oxygen and electrical energy consumption compared to traditional systems.

An ecological process: lower consumption of electricity and water; shorter processing times; purification costs reduced to a minimum; absolute safety for the operator and for the final consumer. These are, very briefly, the main benefits of the new ECOfree 2 highlighted as under;

Three systems in one: The washing machine is able to treat with ozone in the air and in water. This results in greater flexibility; With the combination of both processes, ozone in the air and in the water, and traditional washes, new fashionable effects are obtained by the manufacturers. Furthermore, thanks to the new cold plasma generators Tonello achieves the following advantages: Processing times, purification costs reduced to a minimum, absolute safety for the operator and for the final consumer. These are, very briefly, the main benefits of the new ECOfree 2 highlighted below:

- ❖ The ozone is produced in greater quantities and at higher concentrations;
- ❖ The ozone is dissolved in water with 98% efficiency which in turn means more pronounced and faster bleaching effects;
- ❖ The higher concentration of ozone reduces oxygen consumption by 50%;
- ❖ Oxygen production is constantly optimized, according to ozone production;

As a consequence, energy consumption is also reduced by 50%. The new ECOfree 2 cold plasma generator is less cumbersome and more compact than the previous one, as per Tonello's calculations. ♦
