

Farooq Sitara: Atexco VEGA 3180DL high speed industrial digital textile printer

Atexco is a company specialized in Research and Development, manufacturing, sales and services of digital inkjet printing technology and equipment. Currently, their products and solutions are widely used in concerned industries like fabric, carpet, and signage and graphics printing.

Atexco was established in 1992 as a key company in the Software Park in the Hangzhou Hi-tech Zone and is a serial winner of the prestigious National Torch Prize. The company also undertakes projects in the Hi-tech Research and Development Program (part of the government's 863 plan) and the state's High-tech Industrial Feasibility Project.

According to Mr Farooq Sitara, CEO of Farooq Sitara International, "The Atexco VEGA 3000DT with 32 KYOCERA heads high speed industrial digital textile printer offers 24 hours printing with a

daily output of 8,000 to 12,000 m². Its exquisite sharpness gives perfect clarity, vivid colour and suitable for all types of fabrics. It is equipped with linear motor rail beam, world's top brand components and stands alone electric control cabinet and ink supply system. Its degassing system reduces print head clogging and due to higher ink concentration, it is more economical. It also has intelligent output and ink consumption management."

He added, "Our VEGA 3180P high speed industrial digital sublimation paper printer with a daily output of 6,000 to 9,000 m² and 1200 dpi resolution has

high precision industrial print heads, variable drop, linear motor rail beam and world's top brand components."

Farooq Sitara International demonstrated Atexco VEGA 3180DL with 16 KYOCERA heads, a high speed industrial digital textile printer with the daily output 3500-5000 m² ideal for industrial production at DPS World 2017. With vivid colours and exquisite sharpness, Atexco VEGA 3180L is suitable for all fabric types and attracted many prospective customers during the three-day exhibition. ♦

PT BIPORIN AGUNG highlights ECOINK®R

PT BIPORIN AGUNG is a fully integrated company from Indonesia active in the textile colour business since 1987.

According to Mr Anwar Afandi, Chairman and Managing Director, from the flatbed to rotary and now the digital printing there has been a big change. The digital inks are considered more environmentally friendly and becoming more cost-effective every day.

Our ECOINK®R inks are formulations made from highly purified reactive dyes for digital printing of cellulosic fabrics like cotton, viscose and protein fibres like silk. Their production is supported by sophisticated production and quality control techniques and equipment all geared to

meet exacting specifications delivering inks of the highest quality and shade consistency.

For us, Pakistan is a fast growing and important market and that is why we are

exhibiting at DPS World with Toyota Tsusho Corporation who represent us in Pakistan, said Mr Afandi. I am very pleased with our participation in this exhibition and we hope to continue our participation next year. ♦
