

# “Knit one, purl one” on a STOLL CMS 520 C+ multi gauge machine

Stoll – a name that inspires and at the same time, stands for quality and flexibility in the world of knitting. The Stoll brand has achieved a legendary reputation equipped with many facets. For more than 140 years, the image of a consequently solution orientated manufacturer of flat knitting machines has been maintained and further developed. The Stoll enterprise is the integrative link between the highly sophisticated technology in the area of developing and manufacturing flat knitting machines on the one hand and an innovative independent thinker and developer in the section of Fashion & Technology on the other hand.

STOLL has expanded its gauge range further, adding gauge E1.5 and gauge E2.2 for the extra-bulky knits and extra-chunky yarns that previously demanded hand knitting. Gauge scalability now extends stitch optics from

gauge E1.5 to gauge E5; yarns down to 0.7 Nm can be used. Moreover, the industrial knitting machine offers countless design options: jacquard, intarsia and structured knits – combined

with shaping at tributes in Fully Fashion technique. The design applications reflect urbane lifestyle and extend far beyond apparel. From accessories to interior design, the sky's the limit. ♦

## Welker Spintech conditioning and heat-setting machines

**WELKER is a leading German textile machinery company in the field of conditioning and heat-setting since 1856. With more than 1850 installations world wide it is the most experienced long term specialised supplier. More than 60 agencies world wide belong to the sales and service network.**

### CONDIBOX

The rectangular design of CONDIBOX improves the utilisation of space which represents a considerable reduction of volumes inside the machine. It is quite clear to everybody that less volume to be heated up also needs less energy to do it.

There are a number of key improvements with the objective to increase the efficiency of the machines and to reduce the cost of both water and energy, making the CONDIBOX the most advanced conditioner available in the market:

- ❖ ULTRAFLAT design to reduce volume and loading height.
- ❖ Indirect ECO-HEATERS with optional ECOCYCLE energy recovery.

- ❖ NEW optional WATERFREE pumps.
- ❖ NEW optional PREVAP patent to increase moisture. ♦
