

Saurer Spinning Solutions

Saurer Spinning Solutions participated in IGATEX on their agent's booth. (Moonaco agent for Zinser and Schlafhorst).

Zinser 72XL ring spinning machine is a highly productive ring and compact spinning machine for large spinning mills which intend to increase their rate of return by making production particularly economical. Available with 68.75 and 75

mm gauges, the Zinser 72XL clearly shows its advantages in almost all applications and yarn counts including fancy and special yarns. At the maximum length of 2,016 spindles, the Zinser 72XL reduces production costs by up to 11% and the required floor space by up to 22% compared with shorter machines.

Schlafhorst Autoconer X6 winding machine presents a quantum leap in

process automation. The revolutionary Bobbin Cloud material flow system with intelligent RFID based data management ensures maximum flow rates and minimum personnel requirements. The Autoconer X6 opens up a new dimension of efficiency with smart technology: the new generation offers low resource consumption, clear productivity advantages and even more ergonomic handling. ♦

Autoconer 6 with E³ more productive & economical

Even if the winding machine is only responsible for about 10-15% of the energy consumption (compressed air and electrical energy) when considering the

classic ring spinning process, these criteria play an important role in assessing the performance of the machine. Comparative measurements in the package winding sector show that the Autoconer 6 is not only more productive than the competitors; it also consumes less energy and compressed air and uses the valuable raw material more sparingly. Provided with the latest equipment and E³ certification and with optimum settings, the Autoconer is the most efficient and cost-effective automatic winding machine on the market.

The Autoconer 6 was developed from the outset with the aim of ensuring maximum productivity with the lowest possible consumption of resources. E³, the certificate for triple customer benefits in the fields of energy, economics and ergonomics, guarantees Schlafhorst's customers the greatest possible benefit from technical innovation. A number of factors are responsible for the good results in the comparative test, which are only available for the Autoconer 6 in such an optimal combination. ♦
