

# SPGPrints highlights latest innovations in digital textile printing

ITMA Asia is the place where manufacturers introduce new, cutting-edge developments to the Asian textile printing market. At each edition, textile machinery manufacturers compete for their place in the spotlight by presenting the most innovative developments in their field.

Over the last few years, China's drive for innovation has led to an increase in textile quality and enhancement of global competitiveness of Chinese textile.

At the SPGPrints stand, for instance, visitors will be able to see the BestLEN Direct Laser Engraving system. This system is especially developed for printers wanting to take their engraving department to new performance heights. BestLEN can help make production more efficient and time effective, and deliver high-quality output.

## Live demonstrations

At ITMA Asia, some of the largest digital machine manufacturers will

showcase their digital printing machines and the latest innovations in the field of printing. For visitors to make an even better comparison between different machines, the visitors will be able to see JAVELIN scanning digital textile printer in full production during the live demonstrations at various time slots at the SPGPrints stand.

The JAVELIN printer offers high quality and value to textile printers who are taking the first step into digital production and are looking for ease, reliability, and productivity. The JAVELIN can help the fabric printers make short-run, fast-turnaround jobs affordable for their customers, since it eliminates screen preparation time and frees up time for printing full production runs.

The visitors are invited to see, touch and inspect the high-quality fabric coming out of the JAVELIN and evaluate the output of the scanning digital textile printer.

## Digital printing inks

Textile printers are always looking for ways to improve the quality of their designs and fabrics. An essential element of design quality is the type of ink used for printing. Therefore, at ITMA Asia 2018, there will be an important focus on digital printing inks.

When you demand nothing less than outstanding results, the ink you use should meet your high standards. For that reason, SPGPrints will showcase its full digital ink portfolio optimized for all major industrial print heads, including the Kyocera print heads.

Since all their inks are developed and produced in-house, they can offer unrivaled quality and runnability at competitive prices. ♦
