

SSM preciforce™

At ShanghaiTex, SSM presents solutions for precision package winding and high package consistency and provides a wide range of renowned textile machines.

SSM enables yarn dyers to be successful – with the precision package winder PWX. Only a quick response to market trends in combination with high cost-efficiency enables customers to be competitive. The winder offers clear benefits to dye package winding and rewinding of filament and staple fiber yarns, with or without lubrication.

Precision package winder PWX-MTC enables quick response to market trends.

For the XENO-platform SSM presents the first and only self-regulating backpressure system in the world: preciforce™ for a guaranteed package consistency. Furthermore, the next generation of the blade winding powerblade™ will be introduced for the XENO-platform.

Novibra spindle technologies

Novibra presents the latest innovations in spindle technology and energy saving measures at the forthcoming ShanghaiTex.

The energy saving spindle LENA has been designed for the highest speeds and lower energy consumption. It is the only spindle in the market with 17.5 mm wharve diameter and energy savings in the average of up to 6%.

The new generation of clamping crowns, CROCOdoff and CROCOdoff Forte introduce genuine doffing without underwinding. The crowns work automatically depending on the spindle speed. The major advantages are significant reductions in maintenance costs. That is based on a lower ends down rate after doffing and minimized cleaning of the underwinding area.

Novibra's goal is to bring beneficial and customized solutions to the customers helping them to keep their leading position in the market. Novibra is looking forward to discussing the new products that fulfil one of today's biggest demands for energy savings and maintenance costs reduction.

Graf at ShanghaiTex 2019

Graf introduces at ShanghaiTex three novelties for the textile market: a new card clothing with up to 30% longer lifetime, a height adjustable comb and a helpful solution for card clothing management.

MULTISHARP, the unique wear resistant alloy for card clothings, increases the lifetime of metallic card clothings on the

cylinder by up to 30%. Additionally, the work load of the maintenance team can be minimized by providing longer service cycles and less unplanned downtimes.

The yield on raw material can be increased without compromising the quality requirements – thanks to the continuous height adjustability of the new combs series. The continuous and exact gap setting between nipper and circular

comb on each individual combing head provides customers a new level on raw material utilization. Additionally, the maintenance people will appreciate the comfortable and easy installation of the circular comb.

Visit Graf at ShanghaiTex from November 25 to 28, 2019: Hall E1, Booth A30 with focus on spinning and Booth C35 with focus on nonwoven. ♦
