CECA conducted skill training under University-Industry Linkage Program

National Textile University Faisalabad established (CECA) Center of Excellence in Compressed Air for capacity building of Industry professionals as well as university faculty and students on Industrial Air Engineering and relevant topics in collaboration with the Asian Institute of Industrial Air. Participants from 19 different public and private sector organizations participated in one Day Professional Training Course on “Understanding of Compressed Air Systems” held on January 27, 2021.

Compressed Air is the most important but least understood utility in the textile sector. Realizing the needs of this important knowledge, CECA organized a one-day Professional Certificate course on “Understanding of Compressed Air Systems”. Industry Expert trainers having a strong practical background in maintenance management of Industrial compressors provided an in-depth understanding of compressors and compressed air-related issues faced by the technical managers.

CECA has published an annual training calendar for a series of the training program which will cover the complete domain of compressors and compressed air systems.

The training calendar also includes the training programs related to manufacturing processes and other technologies. The next two days Professional Certificate training program scheduled in February will cover the topic of “Compressor Maintenance.” ♦
